

Adelina Lipşa

Technical Product Owner | Payments, 3DS, Checkout and Chargebacks

Bucharest, Romania | +40 745 362 663 | adelina.lipsa@gmail.com | linkedin.com/in/adelina-lipsa

SUMMARY

Technical Product Owner with a full-stack development background. Product owner for the payments stack of a global affiliate and direct-response platform, product manager for its core engineering team and manager of its technical support team. Owns gateway integrations, 3DS/SCA, alternative payment methods, fraud and chargebacks, and analyses approval rates and checkout conversion with SQL and Datadog. Hands-on with Laravel, Vue and Kubernetes. Certified Professional Scrum Product Owner (PSPO I and PSPO II).

EXPERIENCE

Technical Product Owner & Technical Support Team Manager

Yomali | Sep 2025 – Present | United States

Product owner on the payments stack, product manager for the core engineering team, and direct manager of the technical support team.

Payments

- Own gateway and acquirer integrations: Chase Paymentech, NMI, Braintree, PayPal and Stripe.
- Lead 3DS/SCA authentication and routing, and alternative payment methods including Paze, PayPal Pay Later and Amazon Pay.
- Oversee Kount fraud monitoring and the handling of chargebacks and disputes.
- Analyse payment performance across gateways (approval rates, declines, checkout conversion) using Datadog, log data and SQL. Showed payment success held at 43–45% from June to August, placing a platform-wide conversion decline before the payment step.
- Built 3DS rollout tracking in ClickUp and analysed 25 accounts to separate the 3DS effect from the wider conversion decline.

Product Delivery and Teams

- Run PRDs, standups, weekly reporting and a change log end-to-end in ClickUp, giving leadership one view of dependencies, risks and timelines.
- Write business plans for new initiatives at management's request.
- Moved HR operations from spreadsheets to Factorial.

Customer Support Product

- Built the reporting pipeline and dashboard that replaced a 1.5 to 2 hour manual daily report; used by the CS team to track complaints, chargeback threats and cancellation reasons.
- Proposed a single self-service refund flow to replace a multi-day email process; now in testing.
- Product owner for the refund and return journey (Find Order) and the human escalation protocol for the AI voice agent.
- Evaluated AI quality scoring and support platforms: vendor assessment, cost modelling and scorecard design.
- Managed SMS providers and the related compliance documentation.

Internal Tooling

- Build internal tools hands-on when the team hits a recurring pain point, including the CS dashboard, a link and postback decoder, and the change log.

Technical Project Manager

SiteRocket Labs | Feb 2025 – Sep 2025 | Canada

Technical project manager at a Boston and Toronto agency building secure digital health applications, reporting to the CEO. Led delivery for client Misio Health, managed in Asana.

- Coordinated third-party integrations for Misio's customer groups (BioFlex, Straight Line) with the Liviniti API and Revive Health, managing credentials, validation failures and escalations between the client's CTO, the CEO and the developer.
- Wrote requirements for automated member eligibility processing in Laravel: per-vendor S3 drops, scheduled SFTP transfers to Revive Health, result files written back to Caspio, with retries, logging and Slack alerts.
- Set up AWS S3 folders per vendor for stage and production, with IAM policies restricting each vendor to its own directories, plus vendor records and access credentials.

- Scoped a self-hosted Apple Wallet and Google Wallet membership card service, branded per client and keeping member data in-house for HIPAA, and wrote the engineering estimation brief.
- Built Caspio DataPages for the member app, including the wallet card pages, and turned the service catalogue PDF into a JSON source that drives the Parked It Health branded member app.

Web Developer

Ubisoft | Mar 2024 – Dec 2024 | Bucharest, Romania

QA department web developer on the internal platform testers used daily, from game build deployment to testing.

- Designed, built and shipped features independently, full-stack in Laravel and Vue 2.
- Built a micro-frontend architecture of three Vue apps on one page, coordinated by an orchestrator for shared data and events.
- Integrated the platform with multiple back-end services and databases so testers had everything in one place.
- Deployed to Kubernetes in production, monitored workloads in Rancher, debugged with Kibana, and handled secrets securely in SSH automation scripts.
- Gathered and refined requirements directly with QA teams; evaluated new technologies and contributed to team best practices.

Full-Stack Web Developer and Technical Lead

Fabel X | Jul 2022 – Feb 2024 | Cluj, Romania

Technical Lead from Jul 2023 to Dec 2023.

Full-Stack Web Developer

AgroCity.eu | Jul 2020 – Sep 2022 | Bucharest, Romania

Joined as Development Intern (Jul – Sep 2020). Stack: PHP, Laravel, Vue.js, SQL, TailwindCSS, Webpack.

Full-Stack Web Developer

Innovational | Dec 2020 – Oct 2021 | Bucharest, Romania

ADDITIONAL EXPERIENCE

Founder & Creative Director, Ruined Saints | Jun 2025 – Present. Independent streetwear label.

Founder, Bitly Digital (BITLY S.R.L.) | Mar 2025 – Present. Consulting and custom web development.

SKILLS

Product Management: Product ownership, product backlog management, requirements gathering, PRDs, stakeholder management, cross-functional delivery, vendor evaluation, cost modelling, business plans
