Adelina Lipșa

Technical Product Owner | Delivery Across Teams, Support Operations and Internal Tools

Bucharest, Romania | +40 745 362 663 | adelina.lipsa@gmail.com

linkedin.com/in/adelina-lipsa

SUMMARY

Technical Product Owner with a full-stack development background who works closely with the founder of a global affiliate and direct-response platform on whatever is needed, making sure things get delivered and actually work across the company: core engineering delivery, technical support, a customer support rework, team training and HR on Factorial. Certified PSPO I and PSPO II.

EXPERIENCE

Technical Product Owner & Technical Support Team Manager

Yomali | United States — Sep 2025 - Present

- Own every gap in the company, working closely with the founder on whatever is needed: making sure things get delivered and actually work, whatever area they are in.
- Manage core engineering product delivery and the technical support team. Run requirements, PRDs, priorities and reporting in ClickUp, making dependencies, risks and timelines visible.
- Reworked the customer support department. With its head, code the automations behind its flows and run its statistics; built workflows in Zendesk’s AI agent builder for all our SOPs and documents.
- From the start of the role, wrote the team’s training documents and got everyone working from them; moved HR operations from spreadsheets to Factorial; wrote SOPs for BuyGoods.
- Built a CS reporting pipeline and dashboard that replaced a 1.5 to 2 hour manual daily report, tracking complaints, chargeback threats and cancellation reasons.
- Own the refund and return journey. Proposed a self-service refund flow to replace a multi-day email process; now in testing. Translated the head of customer support’s AI voice agent escalation protocol and made it easier to follow.
- Evaluated our customer support AI agents: wrote a report on their calls, turned those calls into test scenarios run against Zendesk, and assessed AI quality scoring and support platforms through vendor assessment, cost modelling and scorecard design.
- Build internal tools for recurring team needs, including a link and postback decoder and change log; write business plans for new initiatives.
- Write the specs for payments work from the Chief Risk Officer’s documents and work with the developers on delivery.

Technical Project Manager

SiteRocket Labs | Canada — Feb 2025 - Sep 2025

- Reported to the CEO of a digital health agency. Led Misio Health delivery in Asana and coordinated Liviniti and Revive Health integrations, validation and technical escalations.
- Defined automated member eligibility processing in Laravel using S3, SFTP and Caspio, with retries, logging and alerts. Configured vendor-specific S3 access through IAM policies.
- Scoped a self-hosted Apple Wallet and Google Wallet membership service to keep member data in-house; built Caspio member-app pages and a JSON service catalogue.

EXPERIENCE CONTINUED

Web Developer

Ubisoft | Bucharest, Romania — Mar 2024 - Dec 2024

- Independently designed and shipped Laravel and Vue 2 features for QA's daily platform, from game build deployment to testing, refining requirements directly with QA teams.
- Deployed to production Kubernetes, monitored workloads in Rancher, debugged with Kibana and handled secrets securely in SSH automation.

Full-Stack Web Developer and Technical Lead

Fabel X | Cluj, Romania — Jul 2022 - Feb 2024

Technical Lead, Jul - Dec 2023. Delivered projects using React, TypeScript, Ruby on Rails, Vue.js, Node.js, Next.js, .NET and Docker.

Full-Stack Web Developer

AgroCity.eu | Bucharest, Romania — Jul 2020 - Sep 2022

Progressed from intern to full-stack developer. Built with Laravel and Vue.js; brought the app to iOS and Android using Capacitor and published to both app stores.

Full-Stack Web Developer

Innovational | Bucharest, Romania — Dec 2020 - Oct 2021

CORE SKILLS

Product & delivery: Product ownership, backlog prioritisation, requirements, PRDs and specs, Scrum, stakeholder management, team leadership, training documents and SOPs, vendor evaluation and cost modelling.
